

Electrical Rotor Assist Bed

Life and Health Keeper

Electrical Rotor Assist Bed

Life and Health Keeper

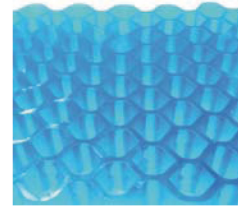

Introducing the patented *Electrical Rotor Assist Bed*, a new health care solution for patients, caregivers, and health care facilities.

Air mattress

- The air mattress support surface is designed for pressure, shear and friction reduction in mind as well as micro climate control to keep patient's skin dry and cool.

Foam mattress with honeycomb gel cushion

- Provides a cool and comfort to sacrum area.
- Redistributes pressure across available contact area whenever patient is repositioned.

● Convenience and comfort:

The Electrical Rotor Assist Bed can be transformed into different position settings (lying in bed, sitting up, and bed exit positions) to respond to the needs of user and caregiver.

● Pressure ulcer prevention:

Two type of mattresses (Powered & Non-Powered) are specifically designed to the bed with an integrated friendly interface control for simplicity and provides a safe and sound pressure ulcer prevention.

● Safety:

With a single click of a button, it can be transformed into bed exit position, frees family members and caregivers from physically demanding labor and reduces their risk of ergonomic hazard.

3 independent motors Auto contour to chair position

Bed positioning spacer

Lockable hand control unit

3 Way Adjustable Assist Rails

- Uniquely designed to enhance convenience and safety for getting in and out of the bed.
- Prevents patients from sliding or falling off the bed.
